PROFILE SUMMARY

Third-year Computer Science undergraduate specializing in Frontend Development with proficiency in React, JavaScript, HTML, and CSS. Experienced in building responsive, user-focused web applications and currently expanding expertise in Data Structures and Algorithms, system design, and scalable architecture. Strong collaborator with a commitment to continuous learning and clear communication.

PROJECTS

My Portfolio Website

JUNE-2025

Frontend-deployed on Vercel

- Developed and deployed a fully responsive personal portfolio website using React and Vite, showcasing projects, skills, and achievements with an optimized and user-friendly interface.
- Successfully implemented modern UI/UX principles, interactive components, and performance optimizations, resulting in a fast-loading, SEO-friendly platform that enhanced personal branding and online presence.

To-Do App

FEBRAURY-2025

Frontend-Backend Integration

- Designed and developed a feature-rich to-do application using Next.js and PocketBase, focusing on seamless task management, real-time data updates, and responsive design.
- Implemented authentication and optimized data handling, providing a smooth user experience while enhancing proficiency in full-stack development and modern backend integration.

Dashboard System

April 2025 - May 2025

Frontend (Group Project)

- Contributed to the development of a dynamic dashboard management system built with React and Vite, collaborating with a cross-functional team to deliver an intuitive and visually appealing interface.
- Assisted in building and integrating key UI components, ensuring responsiveness, usability, and alignment with project design standards.
